Using the data we can construct \bar{x} and R charts The \bar{x} chart monitors the central tendency of the process while the R chart tracks the process variability Calculating control limits would require statistical software but the principle is illustrated If points fall outside the control limits it signals a potential problem in the process requiring investigation Insert a hypothetical \bar{x} and R chart here showing data points within control limits for simplicity A real chart would require calculations based on the data provided Realworld Applications Beyond Manufacturing Montgomerys text transcends the confines of manufacturing Its principles are applicable across numerous domains including Healthcare Monitoring
