this book presents an overview of techniques that are available to characterize sedimentary aquifers groundwater flow and solute transport are strongly affected by aquifer heterogeneity improved aquifer characterization can allow for a better conceptual understanding of aquifer systems which can lead to more accurate groundwater models and successful water management solutions such as contaminant remediation and managed aquifer recharge systems this book has an applied perspective in that it considers the practicality of techniques for actual groundwater management and development projects in terms of costs technical resources and expertise required and investigation time a discussion of the geological causes types and scales of aquifer heterogeneity is first provided aquifer characterization methods are then discussed followed by chapters on data upscaling groundwater modelling and geostatistics this book is a must for every practitioner graduate student or researcher dealing with aquifer characterization

umfassendes lehrwerk über sämtliche aspekte der sedimentologie und der grundlegenden stratigraphie das buch sedimentology and stratigraphy führt in die thematik ein und gibt den leserinnen und lesern werkzeuge zur interpretation von sedimenten und

sedimentgesteinen an die hand dabei werden die prozesse der bildung des transports und der ablagerung von sedimenten behandelt und auf die entwicklung konzeptioneller modelle für sämtliche sedimentumgebungen von wüsten über die tiefsee und riffe bis zu flüssen angewandt für einen umfassenden Überblick über sämtliche aspekte der sedimentologie und stratigraphie werden außerdem verschiedene ansätze zur nutzung stratigraphischer prinzipien bei der datierung und korrelierung von schichten betrachtet die 3 auflage wurde gründlich überarbeitet und aktualisiert dabei wurde die kapitelgliederung so geändert dass nun separate abschnitte zur geomorphologie und zur stratigraphie für jede sedimentumgebung vorhanden sind außerdem enthält die neue ausgabe zusätzliche farbige abbildungen die wesentlichen konzepte die in sedimentology and stratigraphy eingeführt werden umfassen u a die bedeutung von veränderungen in der pflanzen und tierwelt im zeitverlauf und die auswirkungen auf die charakteristik des sedimentumfelds im meer und an land die unterscheidung zwischen modernen umgebungen und dem was in den sedimentabfolgen erhalten geblieben ist mit einer betrachtung glazialerosionaler und von ablagerungen geprägter landformen heutige wüstenumgebungen und äolische ablagerungen in der stratigraphischen abfolge fluviale prozesse mit mustern von neben und verteilerkanälen unterschiedlicher größenordnung und in verschiedenen umgebungen das werk sedimentology and stratigraphy wurde von einem kenntnisreichen autor mit umfangreicher erfahrung auf dem fachgebiet verfasst es ist ein gut verständliches lehrwerk für studierende der geologie und verwandter fachgebiete die sich kenntnisse über die bildung eigenschaften und bedeutung von sedimentgesteinen aneignen möchten

this is a compilation of keynote papers from the 2002 conference of the canadian society of petroleum geologists and the 2004 annual conference of the american association of petroleum geologists and sepm these sessions entitled facies models revisited were intended to capture the state of the art with respect to facies modeling in several key depositional environments this volume is focused on clastic depositional settings including continental aeolian and fluvial estuarine shoreface deltaic shelf and deep water the approach that was encouraged with the authors was to follow a first principles rather than a model driven approach this philosophy was to provide the reader with the tools and rules to create their own models rather than providing them with canned models or templates following this approach it is believed that geoscientists will develop better and more predictive facies of depositional models the editors believe this volume will find a niche with both academic as well as industry and government geoscientists

siliciclastic shallow marine deposits record the interface between land and sea and its response to a variety of forcing mechanisms physical process regime the internal dynamics of coastal and shelfal depositional systems relative sea level sediment flux tectonic setting and climate these deposits have long been the subject of conceptual stratigraphic models that seek to explain the interplay between these various forcing mechanisms and their preservation in the stratigraphic record this volume arose from an sepm research conference on shoreline shelf stratigraphy that was held in grand junction colorado on august 24 28 2004 the aim of the resulting volume is to highlight the development over the last 15 years of the stratigraphic concepts and models that are used to interpret siliciclastic marginal marine shallow marine and shelf deposits

paralic reservoirs reflect a range of depositional environments including deltas shoreline shelf systems and estuaries they provide the backbone of production in many mature basins and contribute significantly to global conventional hydrocarbon production however the range of environments together with relative sea level and sediment supply changes result in significant variability in their stratigraphic

architecture and sedimentological heterogeneity which translates into complex patterns of reservoir distribution and production that are challenging to predict optimize and manage this volume presents new research and developments in established approaches to the exploration and production of paralic reservoirs the 13 papers in the volume are grouped into three thematic sections which address the sedimentological characterization of paralic reservoirs using subsurface data lithological heterogeneity in paralic depositional systems arising from the influence of tidal currents and paralic reservoir analogue studies of modern sediments and ancient outcrops the volume demonstrates that heterogeneity in paralic reservoirs is increasingly well understood at all scales but highlights gaps in our knowledge and areas of current research

this volume grew out of two sepm sponsored events an sepm research conference that took place in casper wyoming in 2002 and an sepm research symposium that was held at the aapg sepm annual meeting in 2003 several other papers have been added to broaden the range of examples presented the theme of the volume incised valleys in time and space has been chosen because of the comparison of valleys of different ages and in different settings is a valuable approach to understanding the role of the many factors that interact to create the valley and to emplace the subsequent valley filling deposits each example whether modern or ancient represents a real world experiment that lacks the temporal and spatial scaling issues that inhibit the application of laboratory experiments of course the dependent and independent variables cannot be controlled in natural systems but our ability to deduce the approximate values of these quantities e g subsidence sediment supply climate is increasing continually such that semiquantitative and even quantitative estimates can be made in some cases almost all of the papers in the volume discuss more than a single incised valley comparing two or more contemporaneous valleys or valleys of different ages in the same geographic area such comparisons bring similarities and differences into sharper focus than any collection of individual case studies could and highlight the relative importance of the many factors that influence the resulting sedimentary succession

the exposed jurassic succession in east and north east greenland has long been presented as an analogue for equivalent deeply buried strata on the norwegian conjugate shelf and offshore north east greenland in particular the upper jurassic marine mudstone succession is often ascribed source rock potential as proven from coeval rocks on the northwest european margin previous outcrop investigations have not convincingly confirmed this potential however and three boreholes were drilled between 2008 and 2010 to provide full coverage of the upper jurassic lower cretaceous petroleum source rock succession in eastern greenland the blokely 1 borehole was drilled in 2008 in central jameson land to investigate the middle oxfordian lower volgian hareelv formation representing the lowermost part of the composite source rock succession the common aim of the collection of eight scientific papers in this bulletin introduced by an account of the technical and logistic challenges of the drilling operation is to document the significance of the hareelv formation in a petroleum geological context papers on the biostratigraphy sedimentology provenance and diagnosis establish the framework and geological history of the succession while companion papers on the source rock potential burial and exhumation history and igneous intrusive activity in the region contribute to an improved understanding of the petroleum geology of the jameson land basin
